
Table of Contents

Foreword	xiii
Acknowledgements	xv
Introduction	1
1. Main Concepts of Phased Array Ultrasonic Technology	5
1.1 Historical Development and Industrial Requirements	5
1.2 Principles	7
1.3 Delay Laws, or Focal Laws	14
1.4 Basic Scanning and Imaging	18
1.5 Limitations and Further Development of Phased Array Ultrasonic Technology	22
References to Chapter 1	25
2. Scanning Patterns and Ultrasonic Views	29
2.1 Scanning Patterns	29
2.1.1 Linear Scan	30
2.1.2 Bidirectional Scan	32
2.1.3 Unidirectional Scan	32
2.1.4 Skewed Scan (for TomoView™ Software)	33
2.1.5 Helicoidal Scan	34
2.1.6 Spiral Scan	34
2.1.7 Beam Directions	35
2.1.8 Other Scanning Patterns	37
2.1.9 Time-Based Scanning	39
2.2 Ultrasonic Views (Scans)	39
2.2.1 A-Scan	41
2.2.2 B-Scan	43
2.2.3 C-Scan	44
2.2.4 D-Scan	44
2.2.5 S-Scan	45
2.2.6 Polar Views	47

2.2.7 Strip Charts	48
2.2.8 Multiple Views and Layouts	48
2.2.9 Combined TOFD and Pulse Echo (PE)	53
2.2.10 Combined Strip Charts	53
2.2.11 R/D Tech TomoView Cube Views	54
References to Chapter 2	56

3. Probes and Ultrasonic Field Formula 59

3.1 Piezocomposite Materials	59
3.1.1 Matching Layer and Cable Requirements	60
3.1.2 Backing Material	61
3.2 Piezocomposite Manufacture	61
3.3 Types of Phased Array Probes for Industrial Applications	65
3.4 Linear Arrays	70
3.4.1 Active Aperture	71
3.4.2 Effective Active Aperture	72
3.4.3 Minimum Active Aperture	72
3.4.4 Passive Aperture	73
3.4.5 Minimum Passive Aperture	75
3.4.6 Elementary Pitch	76
3.4.7 Element Gap	76
3.4.8 Element Width	76
3.4.9 Maximum Element Size	76
3.4.10 Minimum Element Size	76
3.4.11 Sweep Range	77
3.4.12 Steering Focus Power	78
3.4.13 Gain Compensation	79
3.4.14 Beam Length	80
3.4.15 Beam Width	80
3.4.16 Focal Depth	82
3.4.17 Depth of Field	83
3.4.18 Focal Range	84
3.4.19 Near-Surface Resolution	84
3.4.20 Far-Surface Resolution	84
3.4.21 Axial Resolution	85
3.4.22 Lateral Resolution	86
3.4.23 Angular Resolution	88
3.4.24 Main Lobe	89
3.4.25 Side Lobes	89
3.4.26 Grating Lobes	89
3.4.27 Beam Apodization	90
3.4.28 Grating-Lobe Amplitude	90
3.5 Probe on a Wedge	92
3.5.1 Wedge Delay	92
3.5.2 Index-Point Length	93

3.5.3	Index-Point Migration	94
3.6	Beam Deflection on the Wedge	95
3.6.1	Azimuthal Deflection	95
3.6.2	Lateral Deflection	95
3.6.3	Skew Deflection	95
3.6.4	Active-Axis Offset	97
3.6.5	Passive-Axis Offset	97
3.6.6	Probe and Wedge on Curved Parts	98
3.7	2-D Matrix Phased Array Probes	101
3.8	Focal Law Calculator	103
3.9	Standard Array Probes	108
3.10	Other Array Features	108
3.10.1	Sensitivity	108
3.10.2	Impedance	109
3.10.3	Cross Talk	109
3.10.4	Signal-to-Noise Ratio (SNR)	109
3.10.5	Time-Frequency Response Features	109
3.11	Phased Array Simulation Software (PASS)	112
3.12	Probe Design	112
3.12.1	Physics Guidelines	113
3.12.2	Practical Guidelines	116
3.12.3	Probe Identification	117
3.13	Probe Characterization and Tolerances	117
3.13.1	Probe Characterization	118
3.13.2	Tolerances	119
3.14	Industrial Phased Array Probes	120
3.14.1	Olympus NDT Probes	121
3.14.2	Miniature and Subminiature Probes	127
	References to Chapter 3	133

4. Instrument Features, Calibration, and Testing Methods 141

4.1	Instrument Performance	141
4.1.1	Instrument Main Features	141
4.2	Pulser-Receiver	142
4.2.1	Voltage	142
4.2.2	Pulse Width	144
4.2.3	Band-Pass Filters	144
4.2.4	Smoothing	145
4.3	Digitizer	146
4.3.1	Digitizing Frequency	146
4.3.2	Averaging	148
4.3.3	Compression	148
4.3.4	Recurrence or Repetition Rate (PRF–Pulse-Repetition Frequency)	149
4.3.5	Acquisition Rate	149

4.3.6	Soft Gain	152
4.3.7	Saturation	153
4.3.8	Dynamic Depth Focusing (DDF)	154
4.4	Instrument Calibration and Testing	156
4.4.1	Electronic Calibration	156
4.4.2	Simplified Laboratory Testing	161
4.4.3	User On-site Testing (User Level)	162
4.4.4	Tolerances on Instrument Features	165
4.4.5	Instrument Calibration and Testing Frequency	165
	References to Chapter 4	167
5.	System Performance and Equipment Substitution	171
5.1	Calibration and Reference Blocks Used for System Evaluation	171
5.1.1	Reference Blocks and Their Use for System Performance Assessment	175
5.1.2	Influence of Reference-Block Velocity on Crack Parameters	182
5.2	Influence of Probe Parameters on Detection and Sizing	184
5.2.1	Influence of Damaged Elements on Detection, Crack Location, and Height	184
5.2.1.1	2-D (1.5-D) Matrix Probe (4 × 7)	184
5.2.1.2	1-D Linear Probe	185
5.2.2	Influence of Pitch Size on Beam Forming and Crack Parameters	187
5.2.3	Influence of Wedge Velocity on Crack Parameters	191
5.2.4	Influence of Wedge Angle on Crack Parameters	193
5.2.5	Influence of First Element Height on Crack Parameters	195
5.3	Optimization of System Performance	197
5.4	Essential Variables, Equipment Substitution, and Practical Tolerances	203
5.4.1	Essential Variables	203
5.4.2	Equipment Substitution and Practical Tolerances	208
	References to Chapter 5	220
6.	PAUT Reliability and Its Contribution to Engineering Critical Assessment	225
6.1	Living with Defects: Fitness-for-Purpose Concept and Ultrasonic Reliability	225
6.2	PAUT Reliability for Crack Sizing	234
6.3	PAUT Reliability for Crack Sizing on Bars	239
6.4	Comparing Phased Arrays with Conventional UT	242
6.5	PAUT Reliability for Turbine Components	246
6.6	EPRI Performance Demonstration of PAUT on Safe Ends ISI Dissimilar Metal Welds	259
6.6.1	Automated Phased Array UT for Dissimilar Metal Welds	259

6.6.2	Dissimilar Metal-Weld Mock-ups	259
6.6.3	Examination for Circumferential Flaws	260
6.6.3.1	Probe	260
6.6.3.2	Electronic-Scan Pattern	260
6.6.3.3	Mechanical-Scan Pattern	260
6.6.4	Experimental Results on Depth and Length Sizing of Circumferential Flaws	262
6.6.5	Examination for Axial Flaws	264
6.6.5.1	Probe	264
6.6.5.2	Mechanical-Scan Pattern	264
6.6.5.3	Electronic-Scan Pattern	264
6.6.6	Experimental Results on Depth and Length Sizing of Axial Flaws	264
6.6.7	Summary	266
6.7	Pipeline AUT Depth Sizing Based on Discrimination Zones	266
6.7.1	Zone Discrimination	267
6.7.2	Calibration Blocks	268
6.7.3	Output Displays	269
6.7.4	Flaw Sizing	271
6.7.4.1	Simple-Zone Sizing	271
6.7.4.2	Amplitude-Corrected Zone Sizing	272
6.7.4.3	Amplitude-Corrected Zone Sizing with Overtrace Allowance	272
6.7.4.4	Amplitude Zone Sizing with TOFD	273
6.7.4.5	In Practice, How Does Pipeline AUT Sizing Work?	273
6.7.5	Probability of Detection (POD)	275
6.8	POD of Embedded Defects for PAUT on Aerospace Turbine-Engine Components	278
6.8.1	Development of POD within Aeronautics	278
6.8.2	Inspection Needs for Aerospace Engine Materials	280
6.8.3	Determining Inspection Reliability	280
6.8.4	POD Specimen Design	282
6.8.4.1	POD Ring Specimen	284
6.8.4.2	Synthetic Hard-Alpha Specimens	285
6.8.5	Phased Array POD Test Results	286
6.8.5.1	Description of Ultrasonic Setup	286
6.8.5.2	Inspection Results: Wedding-Cake Specimen	287
6.8.5.3	Inspection Results: POD Ring Specimen with Spherical Defects	289
6.8.5.4	Inspection Results: Synthetic Hard-Alpha Specimens ..	291
6.8.6	POD Analysis	292
6.9	Phased Array Codes Status	294
6.9.1	ASME	295
6.9.2	ASTM	296
6.9.3	API	296

6.9.4	AWS	296
6.9.5	Other Codes	297
6.10	PAUT Limitations and Summary	297
	References to Chapter 6	304

7. Advanced Industrial Applications 315

7.1	Improved Horizontal Defect Sizing in Pipelines	315
7.1.1	Improved Focusing for Thin-Wall Pipe	316
7.1.2	Modeling on Thin-Wall Pipe	316
7.1.3	Thin-Wall Pipe Simulations with PASS	317
7.1.3.1	Depth of Field	317
7.1.3.2	Width of Field	318
7.1.3.3	Thin-Wall Modeling Conclusions	319
7.1.4	Evaluation of Cylindrically Focused Probe	320
7.1.4.1	Experimental	320
7.1.4.2	Wedge	320
7.1.4.3	Setups	320
7.1.5	Beam-Spread Results	321
7.1.6	Summary of Thin-Wall Focusing	322
7.2	Improved Focusing for Thick-Wall Pipeline AUT	322
7.2.1	Focusing Approaches on Thick-Wall Pipe	323
7.2.2	Modeling on Thick-Wall Pipe	323
7.2.3	Thick-Wall Modeling Results Summary	325
7.2.3.1	Array Pitch	325
7.2.3.2	Incident Angle	325
7.2.3.3	Focal Spot Size at Different Depths	325
7.2.3.4	Aperture Size	325
7.2.3.5	Increasing the Number of Active Elements	326
7.2.3.6	Checking the Extreme Positions on the Array	326
7.2.4	Thick-Wall General-Modeling Conclusions	326
7.2.5	Instrumentation	327
7.2.6	Thick-Wall Pipe Experimental Results for 1.5-D Phased Array .	327
7.2.6.1	Calibration Standard	327
7.2.6.2	1.5-D Phased Array and the Wedge	328
7.2.6.3	Software	328
7.2.7	Experimental Setup	328
7.2.7.1	Mechanics	328
7.2.7.2	Acoustics	329
7.2.8	Beam-Spread Comparison between 1.5-D Array and 1-D Arrays	330
7.2.9	Summary	332
7.3	Qualification of Manual Phased Array UT for Piping	333
7.3.1	Background	333
7.3.2	General Principles of the Phased Array Examination Method ..	334
7.3.3	Circumferential Flaws	335

7.3.4	Axial Flaws	338
7.3.5	2-D Matrix Array Probes	339
7.3.6	Calibration Blocks	340
7.3.7	Manual Pipe Scanner	340
7.3.8	Phased Array UT Equipment	341
7.3.9	Phased Array UT Software	342
7.3.10	Formal Nuclear Qualification	343
7.3.11	Summary	344
7.4	Advanced Applications for Austenitic Steels Using TRL Probes	344
7.4.1	Inspecting Stainless-Steel Welds	344
7.4.2	Piezocomposite TRL PA Principles and Design	345
7.4.2.1	Electroacoustical Design	347
7.4.2.2	Characterization and Checks	350
7.4.3	Results on Industrial Application of Piezocomposite TRL PA for the Inspection of Austenitic Steel	351
7.4.4	Examples of Applications	352
7.4.4.1	Primary Circuit Nozzle	352
7.4.4.2	Examination of Demethanizer Welds	358
7.4.5	Summary	360
7.5	Low-Pressure Turbine Applications	360
7.5.1	PAUT Inspection of General Electric-Type Disc-Blade Rim Attachments	361
7.5.2	Inspection of GEC Alstom 900 MW Turbine Components	369
7.6	Design, Commissioning, and Production Performance of an Automated PA System for Jet Engine Discs	386
7.6.1	Inspection-System Design Requirements	386
7.6.2	System Commissioning	389
7.6.2.1	Implementation of Automated Phased Array Probe Alignment	392
7.6.2.2	Automated Gain Calibration	396
7.6.3	Performance of Industrial Systems	397
7.6.4	Aerospace POD Conclusions	401
7.7	Phased Array Volume Focusing Technique	404
7.7.1	Experimental Comparison between Volume Focusing and Conventional Zone Focusing Techniques	405
7.7.2	Lateral Resolution Experiments	407
7.7.3	Square Bar Inspections	409
7.7.4	Conclusions	413
	References to Chapter 7	414
	Appendix A: OmniScan Calibration Techniques	417
A.1	Calibration Philosophy	417
A.2	Calibrating OmniScan	418
A.2.1	Step 1: Calibrating Sound Velocity	418
A.2.2	Step 2: Calibrating Wedge Delay	419

A.2.3 Step 3: Sensitivity Calibration	421
A.2.4 Step 4: TCG (Time-Corrected Gain)	422
A.3 Multiple-Skip Calibrations	425
References to Appendix A	426
Appendix B: Procedures for Inspection of Welds	427
B.1 Manual Inspection Procedures	427
B.2 Codes and Calibration	429
B.2.1 E-Scans	429
B.2.2 S-Scans	430
B.3 Coverage	433
B.4 Scanning Procedures	435
B.5 S-Scan Data Interpretation	435
B.6 Summary of Manual and Semi-Automated Inspection Procedures0 ...	437
